

# Instructions

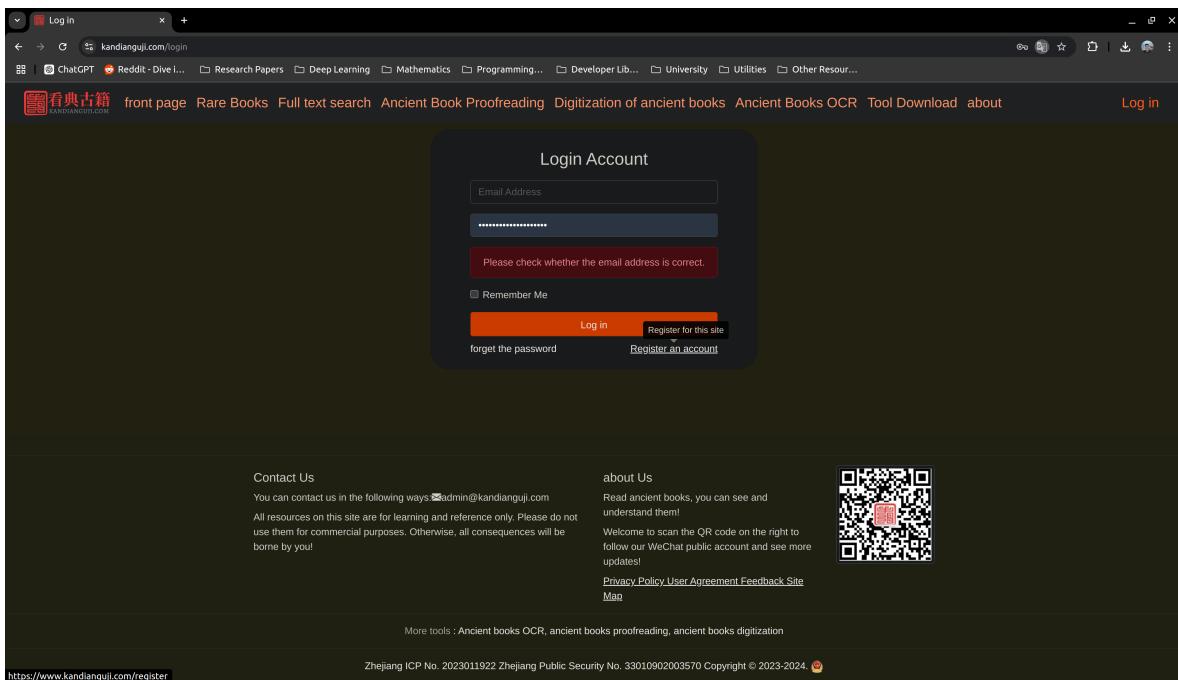

## Create a new account

Please follow the following steps:

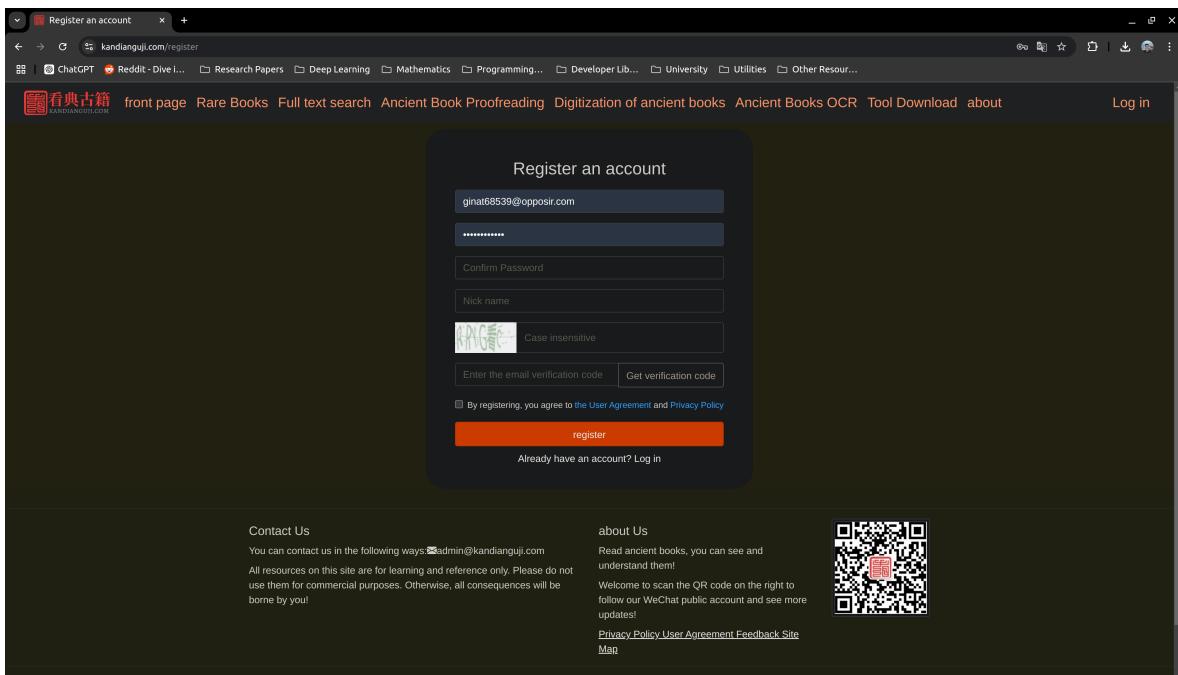

1. Go to the home page [here](#). You may need to use Google Translate to translate all the content to English!

2. Click on "Log in" button on the top right to navigate to Login page. Select "Register an account"

3. You need to input your email, password, and confirmation code before submitting!

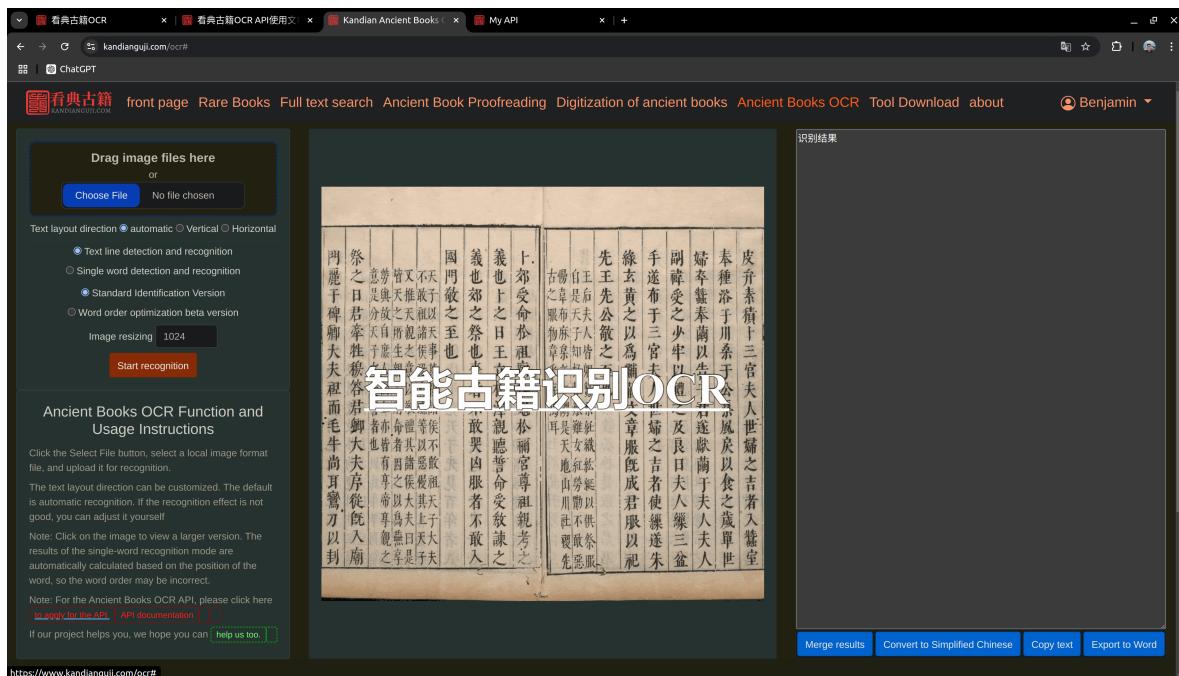

# Token Request

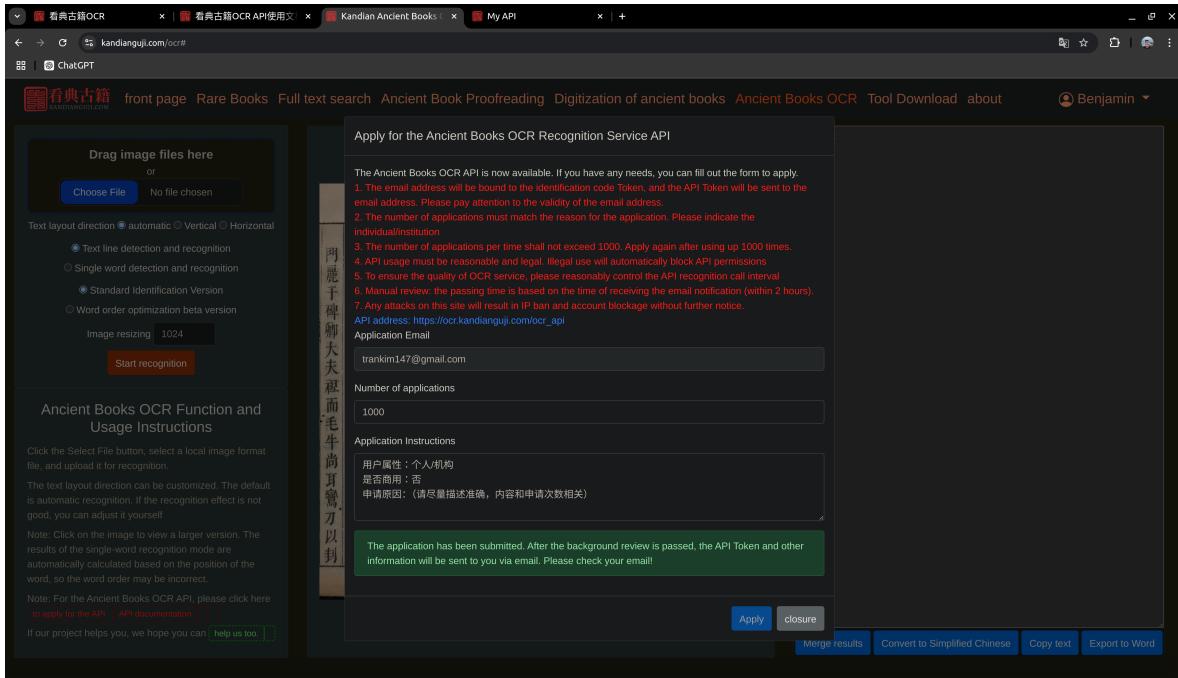

You can visit this [site](#) to read about their documentation for OCR API.

To obtain a token:

1. Please visit [here](#). Left click on "to apply for the API" to request for a new token.

2. Click "Submit". If successful, please go to this [dashboard](#) to view your token status.

### 3. Your token should be available after 5-10 minutes.

#### Notes:

- An account could have multiple tokens at the same time.
- Each token is restricted to 1000 calls only.
- You can leverage parallelism in Python to boost up the process. However, **it is advised to have a time gap (~ 1 to 3 seconds) between calls to avoid crashing the server.**
